

New PVC Skirting Board from EAZYWood! benefits & special features...

4. ~ 12 mm thk. at top of the skirting
→ sufficient "space" for our
fingers to press on during
installation

5. ~ 40 mm H "flat back wall" with
grooved lines surface
→ sufficient "touching area" if
the skirting to be "stick" on the
wall with silicon adhesive, and
better "gripping" with the
grooved lines surface.

3. more solid area at ~ 1
inch (from top of
skirting) → meant for
nailing point / area,
better gripping for
long term.

1. Produced by our latest technology
→ "random wood grained"
technology. The benefit of this
technology are, the wood grain
design on the skirting are in
random basis, like real timber.
You can't find 2 pieces of skirting
100% same! It looked more real
and natural. It meant to be
inconsistent effect.

2. Currently we have selected 4 colours (see attached), which are commonly used in the market
(matching to most of the laminated or vinyl flooring colour)

New PVC Skirting Board from EAZYWood !

"bamboo"
